

# LOGGING EQUIPMENT

MATCH THE EQUIPMENT WITH THE NUMBERS!

- Yarder** - This machine is used in steep mountain areas. It has a system of power-operated winches and a tower used to pull logs from a cutting area up to a landing.
- Heli-Logging** - This method of logging is used to remove cut trees from the forest by lifting them with cables attached a helicopter.
- Skidder** - This machine drags the logs along the ground from the felling site to a roadside landing.
- Feller Buncher** - This machine is used to cut trees. It has a grabbing device with a saw attached that cuts the trees down. The machine then places the cut trees in a pile on the ground.
- Track Loader** - This machine can be used for sorting logs and loading logging trucks.
- Excavator** - This machine is used to build logging roads by clearing the way and removing boulders and stumps and digging ditches.
- Rubber Tire Loader** - This machine is used to load and unload logging trucks. It has a grapple that can grab several logs at once.
